

Mohana Navaneetha Krishnan R
mohana.navaneetha@indiumsoft.com

PROFESSIONAL EXPERTISE

- An aspiring **Full stack developer** with knowledge of frontend and backend technologies and tools.
- Knowledgeable about creating, developing and hosting websites, as well as writing APIs that can retrieve data and carry out **CRUD** tasks.
- I have experience with front-end web development and am adept at creating visually appealing and responsive user interfaces using **HTML, CSS, and additional external libraries i.e. Bootstrap.**
- Adept in **JavaScript**, proficient in utilizing its powerful features to develop interactive and efficient frontend solutions, enhancing user experiences and functionality across various platforms.
- Proficient in leveraging **Node.js** and **Express.js** to build robust and scalable server-side applications, optimizing performance and handling asynchronous operations effectively.
- Well versed and familiar with frameworks like **React** for developing web-apps and proficient in building dynamic and interactive UI for web applications.
- Proficient in utilizing functional components, **React hooks**, and **props** to create reusable and maintainable React applications, optimizing state management, component reusability, and data flow for enhanced user experiences.
- Proficient in utilizing **Figma** to create visually appealing and user-friendly interface designs, focusing on enhancing user experiences and optimizing usability across various platforms
- Skilled in leveraging **NextJS** to build efficient and dynamic web applications with server-side rendering capabilities and to make use of effective app routing and folder-based routing.
- Proficient in leveraging **Tailwind-CSS** to design visually cohesive and engaging user interfaces, ensuring consistent design patterns and streamlined component styling for enhanced user experiences.
- Equipped with a good understanding of Java programming fundamentals, including syntax, data types, and object-oriented principles, capable of developing basic applications and making valuable contributions to Java-centric projects.
- In Backend, proficient in Spring Boot and experienced in JWT implementation for secure authentication and authorization.

- Experienced in setting up **Service Registry** and **API Gateway** to facilitate service discovery, routing, and management, enhancing the efficiency and reliability of micro service-based applications.
- Skilled in executing CRUD operations in both frontend and backend settings, facilitating smooth data handling and management throughout the application architecture.
- Experienced in utilizing Selenium for automated web application testing, proficient in creating and executing test scripts to ensure reliable functionality, performance, and user experience across various browsers and platforms.
- Proficient in utilizing Postman for efficient API testing and debugging, ensuring comprehensive validation and verification of endpoints to achieve optimal functionality and performance.
- Proficient in managing **MySQL**, **PostgreSQL**, **MongoDB**, and **Firebase** databases, adept at designing schemas, executing complex queries, and optimizing database performance. Skilled in leveraging MySQL for efficient storage, retrieval, and management of structured data across diverse applications.
- Good knowledge of **socket** programming, adept at implementing bidirectional communication channels between clients and servers in real-time. Skilled in utilizing WebSocket and Socket.IO to facilitate seamless data exchange, enabling features like live chat, notifications, and collaborative editing in web applications.

EXPERIENCE SUMMARY

- Graduate Engineer Trainee (App Engineering) in Indium Software (India) Pvt Ltd

EDUCATION

Bachelor of Engineering in Mechanical Engineering.

TECHNICAL SKILLS

Frontend	HTML, CSS, JavaScript, React, NextJS, Tailwind-CSS, Bootstrap.
Backend	Spring Boot, Node-JS, Express-JS, JAVA,Django
Database	MySQL, Firebase, MongoDB.
Deployment and Version Control	Git and GitHub

UI/UX	Figma
API Testing	Postman
Operating System	Windows

PROJECT -1

Project	Cloud Cost Optimizer
Role	Full Stack Developer

Roles & Responsibilities:

1. Frontend Contributions:

- **UI/UX Design and Development:** Developed user-friendly dashboards to visualize AWS cost and resource usage data. Utilized React.js in conjunction with Material UI, Swiper, and Recharts to build a responsive and interactive interface. Emphasized the creation of reusable UI components, enhancing the application's modularity and maintainability.
- **Visualization:** Employed Recharts and E-charts to effectively present complex cost data through various chart types, such as line, bar, and pie charts, allowing for clear and insightful data interpretation.
- **Accessibility and Consistency:** Ensured a consistent, visually appealing, and accessible user interface by adhering to established design principles and optimizing Material UI components like tables, pop-ups, and cards for improved user experience.

2. Backend Contributions:

- **API Development:** Developed and maintained APIs using Django to interface with AWS services. Worked closely with the DevOps team to ensure APIs met project requirements efficiently.
- **Authentication and Security:** Implemented JWT authentication and authorization in Django to secure application access.
- **AWS Integration:** Utilized AWS SDK for Python (Boto3) to integrate AWS services such as IAM, EC2, S3, VPC, and RDS. Gathered and analyzed data for comprehensive reporting and optimization.
- **Cost Optimization:** Leveraged AWS CloudWatch and Cost Explorer to monitor, analyze, and optimize AWS resource utilization and spending, contributing to effective cost management strategies.
- **Cross-Functional Collaboration:** Actively participated in troubleshooting and resolving bugs, collaborating with cross-functional teams to enhance the project's backend infrastructure, ensuring scalability, and efficient data processing.

PROJECT - 2	
Project	Uber LLM App Engg
Role	Prompt Engineering

Roles & Responsibilities:

- 1. **Prompt Design and Development:**
 - **Craft Effective Prompts:** To ensure that large language models (LLMs) produce appropriate and accurate responses, design and build prompts that are exact and easy to understand.
 - **Iterative Refinement:** To improve prompts' efficacy and relevancy, make ongoing improvements based on user feedback and performance data.
- 2. **Performance Monitoring and Optimization:**
 - **Analyze Performance:** Track and assess prompt performance to pinpoint areas that need work, then make data-driven modifications to maximize response times.
 - **Incorporate Feedback:** To ensure that prompts adequately address user requirements and expectations, leverage input from stakeholders and users to make iterative modifications.
- 3. **Communication:**
 - **Share Best Practices:** Stay informed about the latest advancements in prompt engineering and LLM technology, sharing insights and best practices with the team.
- 4. **Research and Innovation:**
 - **Explore New Techniques:** Investigate and apply innovative techniques in prompt engineering to enhance LLM interactions and performance.
 - **Drive Continuous Improvement:** Propose and test new approaches to improve prompt effectiveness, contributing to ongoing advancements in AI-driven applications.
